

Linear Servo Actuator **LSA**

WIDE-RANGING
LINEUP TO
SUPPORT SMALL
TO LARGE
SYSTEMS

A FULL LINEUP OF MODELS M

Maximum speed of 2,500 mm/sec, maximum acceleration/ deceleration of 3 G, maximum payload of 120 kg, and maximum stroke of 4 m.

- Compact, lightweight shaft type
- Small type with flat motor achieving high thrust with a slim body
- Flat type ideal for vertically confined space
- Medium type boasting high moment rigidity
- Large type capable of transferring a maximum load of 120 kg over 4 m

MEETING VARIOUS APPLICATIONS

Select from three types of controllers. Controllers supporting three different control modes—positioner, pulse-train and program—are available.

A new multi-slider collision prevention function has been added to the SSEL/XSEL controller series.

1-axis controller capable of operating actuators in the positioner mode and pulse-train mode

SCON

NEW

1-axis/2-axis program controller achieving high cost performance

SSEL

NEW

High-performance program controller capable of controlling up to six axes at the same time

X-SEL

Performance/Functions

Capable of Transferring a Payload of Up to 120 kg over a Length of Up to 4.15 m

Despite its compact body, the large type (W21 type) generates a high rated thrust of 400 N through its unique structure that adopts a high-density coil with core and flat magnet. This high thrust enables the actuator to accommodate a payload of up to 120 kg. The W21 can also be ordered with a long stroke of up to 4.15 m, which is ideal for transferring large LCD boards.

Significant Reduction in Cycle Time with a High Acceleration of Up to 3 G and High Speed of 2.5 m/sec

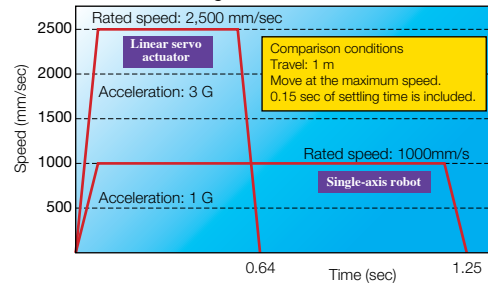

The high performance backed by the maximum acceleration of 3 G and maximum speed of 2.5 m/sec reduces the cycle time significantly compared to when single-axis robots of ball-screw type are used. Unlike with ball-screw actuators, linear servo actuators will not suffer from a drop in their maximum speed as a result of reaching a dangerous speed, even when operated over a long stroke. This means that loads can be transferred reliably at high speed.

Multi-slider Type and Synchronization Function

We have a line of multi-slider models that allow multiple sliders to be operated on a single actuator. These configurations are very effective in saving space and reducing the cycle time. Also, you can use the synchronization function - a popular function offered by the XSEL controller series - to configure a system for transferring glass boards whose size is increasing, or transferring a load at high speed over a wide range.

■ Comparison of Traveling Time between Linear Servo Actuator and Single-axis Robot

Multi-slider type

Synchronized operation

Variations/Structures

A Wide-ranging Lineup Supporting Small to Large Systems

Our linear servo actuators are classified into the small, lightweight shaft type, small type with a slim body, flat type with low height, intermediate type offering excellent moment rigidity, and large type capable of transferring a maximum load of 120 kg, among others. We provide a wide selection for you to choose from according to your specific application.

Compact, Low-cost Shaft Type

The shaft has a built-in magnet surrounded by a coil to utilize magnetic flux in all directions. As a result, even the compact actuator can generate high thrust. Since the structure requires fewer magnets, the shaft type also offers a great cost advantage.

Large, High-thrust Type for High-load Applications

The large, high-thrust type adopts a roller-guide structure to support high loads of up to 120 kg. Since the roller guide is less subject to elastic deformation due to load compared to the ball guide, the operation is quiet and smooth while high moment rigidity is also ensured.

Section View of Large Type

Maintainability/Low Cost

AQ Seals Achieving Maintenance-free Operation for a Long Time

With linear servo motors, the magnet is not contacting the coil, which means these motors do not need maintenance. Also, all shaft models come with AQ seals installed on their guide. AQ seals supply lubricating oil to the guide over a long period, so the guide need not be oiled for years.

Low Cost

A majority of parts and components comprising IAI's linear servo actuators, such as the base, guide, linear motor and linear scale, have been developed internally by IAI. Use of in-house parts and components means that the costs of these actuators are kept to a minimum.

■ Traveling Test Data (with/without AQ Seals)

■ Section View of Shaft Type

Controller

Easy Control

Just like single-axis robots and motorized cylinders, operation of IAI's linear servo actuators is very easy. All you need is to connect the actuator to a controller using a dedicated cable and supply the power. The actuator is now ready to go without cumbersome settings or adjustments. You can also select a desired controller from three different types according to your specific application.

Multi-slider Collision Prevention Function

A new function has been added to prevent two sliders from colliding with each other when operated independently in the multi-slider operation mode.

SCON

Positioner/Pulse-train Control

A dedicated single-axis controller offering both the positioner function and pulse-train input function. Low price is also an attractive feature of the SCON controller.

SSEL

Program/Positioner Control

A program controller capable of controlling up to two axes using a simple program (SEL language). The SSEL controller can be used standalone without any external device (PLC). You can also switch to the positioner mode to use the SSEL as a positioner controller.

X-SEL

Program Control of Up to 6 Axes

A high-function, multi-axis controller capable of controlling up to six axes simultaneously. You can also control a combination of linear servo actuators and single-axis robots using the X-SEL.

System Configuration

SSEL Controller

XSEL Controller

■ Examples of Use

Loader/Unloader

By using a multi-slider type, you can perform with one actuator what normally requires two actuators. This saves both space and cost.

Transfer of Parts between Processes

Boasting the maximum acceleration of 3 G and maximum speed of 2.5 m/sec, linear servo actuators can certainly reduce your cycle time.

Glass Board Transfer System

By synchronizing two large actuators each capable of transferring a load of up to 120 kg, you can also transfer large glass boards.

Glass Board Inspection System

A combination of a large linear servo actuator with the maximum stroke of 4,155 mm, with a small linear servo actuator, allows for high-speed inspection over a wide range.

■ Model Selection

When selecting an appropriate linear servo actuator, remember that your actuator must meet the following two conditions.

- The thrust required for acceleration is equal to or less than the maximum thrust of the linear servo actuator.
- The thrust during continuous operation is equal to or less than the rated thrust of the linear servo actuator.

The above conditions are explained using the trapezoid operation pattern as an example.

In the above graph:

t : Operation time per cycle (sec) tr : Time traveled at constant speed (sec)
 ta: Acceleration time (sec) td: Deceleration time (sec)
 tc: Settling time (sec)

The operation pattern shown to the left can be converted to the graph below where the vertical axis represents thrust:

In the above graph:

Fa: Thrust required for acceleration (N) Fd: Thrust required for deceleration (N)
 Ff: Traveling resistance (N)

Selection method

Condition ① Maximum Thrust

For the slider to accelerate according to the command, the thrust required for acceleration, or Fa, must be smaller than the maximum thrust of the linear servo actuator.

Calculate the thrust required for acceleration (Fa) using the formula below:

$$F_a = (M+m) \cdot a + F_f$$

M : Weight of slider (kg)

m : Slider load (kg)

a : Command acceleration (m/sec²) Ff : Traveling resistance (N)

	Weight of slider (kg)	Traveling resistance Ff (N)	Maximum thrust (N)
S6SS	1.4	5V + 5	60
S8SS	1.7	9V + 7	100
S8HS	2.0	9V + 7	140
S10SS	3.5	20V + 13.5	260
S10HS	4.0	20V + 13.5	320
H8SS	1.5	2V + 10	90
H8HS	2.0	2V + 10	180
L15SS	1.5	2V + 10	90
N19SS	5.5	16V + 12	Refer to the graph on the right.
W21SS	10.0	20V + 70	600
W21HS	20.0	20V + 70	1200

* V: Slider traveling speed (m/sec)

(The attained speed is used under the triangle operating condition.)

Maximum thrust of N19SS

If the obtained value of Fa is smaller than the maximum thrust of the linear servo actuator, condition ① is satisfied.

$$\text{Thrust required for acceleration (} F_a \text{)} \leq \text{Maximum thrust of linear servo actuator}$$

If the thrust required for acceleration (Fa) exceeds the maximum thrust of the linear servo actuator, the slider load or acceleration must be reduced.

Check the maximum payload and maximum acceleration using the following formulas, respectively:

$$\begin{aligned} \text{Maximum payload} & \quad m = (F_a - F_f) / a - M \\ \text{Maximum acceleration} & \quad a = (F_a - F_f) / (M + m) \end{aligned}$$

Condition ② Thrust during Continuous Operation

After considering the load and duty, the thrust during continuous operation, or F_t , must be smaller than the rated thrust of the linear servo actuator.

Calculate the thrust during continuous operation using the formula below:

$$F_t = \sqrt{\frac{F_a^2 \cdot t_a + F_f^2 \cdot t_f + F_d^2 \cdot t_d}{t}}$$

F_a : Thrust required for acceleration (N) F_d : Thrust required for deceleration (N)
 t_a : Acceleration time (sec) t_d : Deceleration time (s)
 F_f : Traveling resistance (N) t : Operation time per cycle (sec)
 t_f : Rated traveling time (sec) ($t = t_a + t_f + t_d + \text{settling time} + \text{stationary time}$)

Thrust during continuous operation (F_t) ≤ Rated thrust of linear servo actuator

■ t_a represents the acceleration time. Here, how to calculate t_a varies depending on whether the actuator is operated in the ① trapezoid pattern or ② triangle pattern.

Whether a given operation pattern is trapezoid or triangle can be determined by whether the speed attained by the actuator when operated over the specified travel at the specified speed is greater or smaller than the specified speed.

$$\text{Attained speed } (V_{max}) = \sqrt{\text{Travel (m)} \times \text{Specified acceleration (m/sec}^2)}$$

Specified speed < Attained speed → ① Trapezoid pattern
 Specified speed > Attained speed → ② Triangle pattern

① Trapezoid pattern

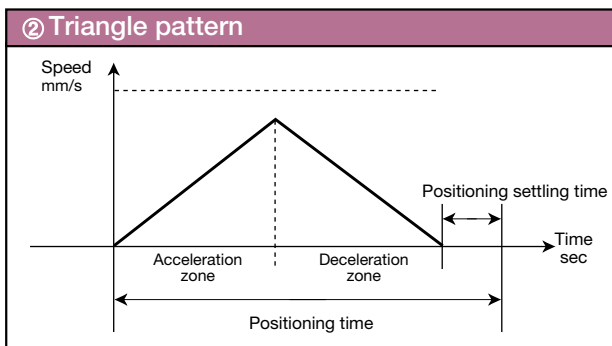

$$t_a = V_s / a$$

V_s : Specified speed (m/sec) a : Command acceleration (m/sec²)

② Triangle pattern

$$t_a = V_t / a$$

V_t : Specified speed (m/sec) a : Command acceleration (m/sec²)

■ t_f represents the time traveled at constant speed. Calculate t_f by calculating the distance traveled at constant speed, as follows:

$$t_f = L_c / V$$

L_c : Time traveled at constant speed (m)

V : Command speed (m/sec)

* Distance traveled at constant speed =
 Travel – Acceleration distance – Deceleration distance
 Acceleration distance (deceleration distance) = $V^2/2a$

■ F_d represents the thrust required for deceleration. Calculate F_d using the formula below:

$$F_d = (M + m) \cdot a - F_f$$

■ t_d represents the deceleration time. If the acceleration is the same as the deceleration, t_d should be the same as the acceleration time.

$$t_d = V/a \quad V: \text{Speed (m/sec)} \quad a: \text{Acceleration (m/sec}^2)$$

■ t represents the operation time per cycle and is calculated as a total sum of the acceleration time (t_a), constant speed time (t_f), deceleration time (t_d), settling time (refer to the table below), and stationary time.

Models	Settling time
S6SS, S6SM, H8SS, H8SM, H8HS, H8HM, W21SS, W21SM, W21HS, W21HM	0.15s
S8SS, S8SM, S8HS, S8HM, S10SS, S10SM, S10HS, S10HM, N19SS, N19SM	0.2s

If the thrust during continuous operation (F_t) obtained as above is smaller than the rated thrust, condition ② is satisfied.

	Rated thrust (N)		Rated thrust (N)
S6SS	15	H8SS	30
S8SS	25	H8HS	60
S8HS	35	L15SS	30
S10SS	65	N19SS	100
S10HS	80	W21SS	200
		W21HS	400

If you want to use the maximum acceleration obtained in the test of condition ① to calculate the cycle time that allows for continuous operation, check if the calculated result is viable using the formula below:

$$t = \frac{F_a^2 \cdot t_a + F_f^2 \cdot t_f + F_d^2 \cdot t_d}{F_t^2}$$

The actuator can be operated under conditions where both conditions ① and ② above are satisfied.

If either condition is not satisfied, reduce the slider load, acceleration or duty (*) or take other appropriate measures.

* To reduce the duty, the ratio of traveling time (acceleration + constant speed + deceleration) to cycle time must be lowered.

Exercise

Let's select a linear servo actuator using the selection method explained in the preceding section.

★ Operating conditions

- Actuator model LSA-H8SS
- Speed 2.5m/sec
- Acceleration 19.6m/sec² (The deceleration is assumed to be the same.)
- Travel distance 1.5m
- Slider load 3kg
- Settling time 0.15sec
- Stroke 1.5 m The actuator will move back and forth under the above conditions.

$$*1G = 9.8m/s^2$$

The above operation pattern is illustrated by the graph shown to the right.
Now, let's start calculation according to the selection method.

Condition ① Calculate the maximum thrust

Apply the above operation pattern to the formula for maximum thrust explained earlier:

$$F_a = (M + m) \cdot a + F_f$$

Where,

M : Weight of slider (kg): 1.5 kg for the H8SS

m : Slider load (kg): 3 kg is used in this exercise.

a : Command acceleration (m/sec²) : 19.6 m/sec² is used in this exercise.

F_f : Traveling resistance: 15 N is used in this exercise.

Based on the above conditions, the formula is rephrased as follows:

$$F_a = 4.5 \times 19.6 + 15 \rightarrow 103.2N$$

Since the maximum thrust of the H8SS is 90 N, **this actuator cannot be used under these conditions.**

Accordingly, either the slider load or acceleration must be changed.

If the slider load is to be changed without changing the acceleration, the maximum load is calculated as follows:
 $m = (90 - 15) \div 19.6 - 1.5 \rightarrow 2.32 \text{ kg}$

If the acceleration is to be changed without changing the slider load (3 kg), the maximum acceleration is calculated as follows:
 $a = (90 - 15) \div (1.5 + 3) \rightarrow \text{Approx. } 16.6m/s^2$

In this exercise, the acceleration is changed to 16.6 m/sec².

$$F_a = 4.5 \times 16.6 + 15 \rightarrow 89.7N < 90N \text{ (maximum thrust)}$$

Condition ② Calculate the thrust during continuous operation

Apply the above operation pattern to the formula for thrust during continuous operation explained earlier. For your reference, the command acceleration is assumed to be 16.6 m/sec² based on the examination result of maximum thrust:

$$F_t = \sqrt{\frac{F_a^2 \cdot t_a + F_f^2 \cdot t_f + F_d^2 \cdot t_d}{t}}$$

Now, when the operation pattern at t_a is checked, the following is revealed:

$$\text{Attained speed (Vmax)} = \sqrt{1.5 \times 16.6} \rightarrow 4.9 \text{ m/sec}$$

Since this value is greater than the specified speed of 2.5 m/sec, the operation pattern is determined to be trapezoid.

$$\text{Accordingly, } t_a = 2.5 \div 1.6 \rightarrow 0.15s$$

Next, t_f is calculated.

$$\text{Distance traveled at constant speed} = 1.5 - \{(2.5 \times 2.5) \div (2 \times 16.6)\} \times 2 \rightarrow 1.12m$$

$$t_f = 1.12 \div 2.5 \rightarrow 0.45s$$

$$\text{Thrust required for deceleration } F_d = (1.5 + 3) \times 16.6 - 15 \rightarrow 59.7N$$

$$\text{Since } t_d = t_a, t = t_a + t_f + t_d + 0.15 \rightarrow 0.9 \text{ sec.}$$

When the above values are applied, the earlier formula is rephrased as follows:

$$F_t = \sqrt{\{(89.7 \times 89.7) \times 0.15 + (15 \times 15) \times 0.45 + (59.7 \times 59.7) \times 0.15\} \div 0.9} \rightarrow 45.25N$$

Since the result exceeds the rated thrust of the H8SS, or 30 N, **this actuator cannot be used in this operation pattern.**

Now, let's calculate the cycle time that allows for continuous operation:

$$t = \{(89.7 \times 89.7) \times 0.15 + (15 \times 15) \times 0.45 + (59.7 \times 59.7) \times 0.15\} \div (30 \times 30) \rightarrow 2.05s$$

As evident from the result, continuous operation can be performed if the cycle time is increased from 0.9 sec to 2.05 sec.

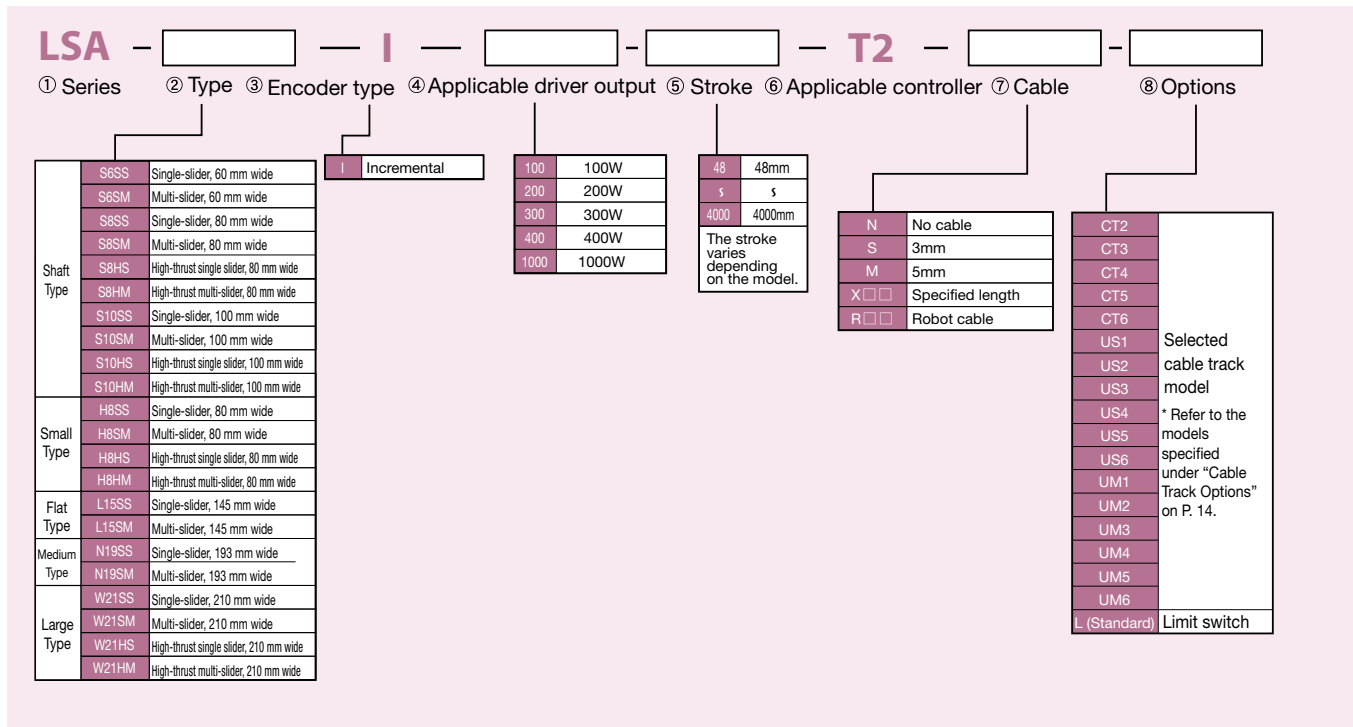

So, let's recalculate by assuming $t = 2.05$.

$$F_t = \sqrt{\{(89.7 \times 89.7) \times 0.15 + (15 \times 15) \times 0.45 + (59.7 \times 59.7) \times 0.15\} \div 2.05} \rightarrow 30N$$

Now, the actuator can be operated.

Model

① Series

Indicate the name of each series.

② Type

Indicate the type, actuator width, motor type and slider type.

Example) S 10 S M

③ Encoder type

Indicate the type of the encoder installed in the actuator.

I: Incremental type

Since the slider position data is lost every time the power is turned off, home return must be performed every time the power is turned on.

④ Applicable driver output

Indicate the driver wattage of the controller to be connected.

⑤ Stroke

Indicate the stroke (range of operation) of the actuator (unit: mm).

⑥ Applicable controller

Indicate the types of controllers with which the actuator can be operated.

T2: SCON/SSEL/XSEL - P/Q

⑦ Cable length

Indicate the length of the motor/encoder cable connecting the actuator and controller.

N: No Cable

S: 3m

M: 5m

X□□: Select this option if you want to specify a length other than 1, 3 and 5 m

(Example: X08 = 8 m) (*) The standard cables are robot cables.

* The maximum cable length is 20 m for the SCON/SSEL and 30 m for the XSEL.

⑧ Options

Indicate the options to be installed on the actuator.

Refer to the facing page for details on CT2 to UM6.

* With the large type, the limit switch is a standard feature (required option). However, you must still specify "L" in the model name.

■ Cable Track Options

The cable track that comes standard with the shaft type and small type is designed exclusively for wiring a linear servo actuator and provides no space for additional cables the customer may require.

If you must wire additional cables, specify a cable track for user wiring by selecting an appropriate model from the right.

Cable tracks are available in two sizes of S and M, and you can select the installation direction from the six types illustrated below.

* Although cable tracks for user wiring are not available for the flat type, medium type and large type, you can still specify a desired installation direction for the standard cable track (excluding the sideways specification.)

【Cable Track for User Wiring】

【Model】

Model	Installation direction	Cable track for user wiring
—	1 (Standard)	None

US6	6	
UM1	1	Type M
UM2	2	
UM3	3	
UM4	4	
UM5	5	
UM6	6	

【Installation direction】

Cable track direction 1 (standard)

This is the standard installation direction that applies when a cable track direction is not specified. With a single-slider model, the cable track is installed in the direction shown below. With a multi-slider model, one cable track is installed on both ends.

Cable track direction 2 (opposite): CT2

The cable track is installed on the opposite side compared to the standard specification.

Cable track direction 3 CT3

The home is reversed from the standard specification (cable track direction 1).

Cable track direction 4 CT4

The home is reversed from the CT2 specification (cable track direction 2).

Cable track direction 5 (sideway, standard): CT5

This is the standard installation direction for actuators specified for sideway installation. With a single-slider model, the cable track is installed in the direction shown below. With a multi-slider model, one cable track is installed on both ends.

Cable track direction 6 (opposite specification): CT6

The cable track is installed on the opposite side compared to the sideway specification.

■ Stainless Sheet (Replacement Sheet)

This stainless sheet is a dustproof sheet that prevents foreign objects from entering the actuator.

If the sheet has broken or become damaged, order a replacement sheet by selecting an appropriate model from the right.

Applicable Controller Specifications

Applicable controller	Maximum controlled axes	Operating method	Power-supply voltage	Reference page
XSEL	6 axes	Program	Single-phase/ three-phase AC 200 V	→P53
SSEL	2 axes	Program/positioner	Single-phase AC100/200V	→P52
SCON	1 axis	Pulse train/positioner	Single-phase AC100/200V	→P51

(Note 1) The maximum speed may not be attained if the stroke is short.
(Note 2) The maximum acceleration varies depending on the operating conditions.
(Note 3) The maximum cable length is 20 m for the SCON/SSEL and 30 m for the XSEL. Specify a desired length in units of meters. (Example: X08 = 8 m)

LSA-S6SM

Shaft Type, 60 mm wide
Standard type, multi-slider

■ Model Name **LSA-S6SM** - **I** - **100** - - **T2** - -

Series — Type — Encoder type — Applicable drive output — Stroke — Applicable controller — Cable length — Options

I: Incremental specification 100W 100 : 40:40mm } T2 : N: None S: 3m M: 5m Refer to the options table below.
SCON SSEL XSEL-P/-Q X□□:

* Refer to P. 13 for details on each item comprising the model name. 1048:1048mm

Model Specifications

Model	Encoder type	Applicable drive output (per slider)	Stroke Specified in 48-mm steps (mm)	Speed (Note 1) (mm/sec)	Payload (Note 2)		Rated thrust (N)	Maximum thrust (N)	Maximum acceleration (G) (Note 2)
					Horizontal (kg)	Vertical (kg)			
LSA-S6SM-I-100- <input type="checkbox"/> -T2- <input type="checkbox"/> - <input type="checkbox"/>	I: Incremental	100	40-1048	2500	3	-	15	60	3

* In the above model names, indicates the stroke, indicates the cable length, and indicates the options.

Options

Name	Model	Reference page	Remarks
Cable track installation direction	CT5	→P14	Sideway specification
Cable track for user wiring, type S	US1/US5	→P14	Standard specification/sideway specification
Cable track for user wiring, type M	UM1/UM5	→P14	Standard specification/sideway specification

Note) To change the cable track position to the opposite side, install the actuator by rotating it 180 degrees horizontally because the actuator is bilaterally symmetrical.

Common Specifications

Drive method	Linear servo motor
Positioning repeatability	±0.005mm
Guide	Built-in linear guide
Permissible load moment	Ma: 28.9N • m Mb: 41.2 • m Mc: 22.5N • m
Overhang load length	300 mm or less in Ma direction / 300 mm or less in Mb/Mc directions
Base	Material: Aluminum with white alumite treatment
Applicable controller	T2: SCON, SSEL, XSEL-P/Q
Cable length (Note 3)	N: No Cable S: 3m M: 5m X□□: Specified length
Ambient operating temperature	0 to 40°C, 85% RH or below (non-condensing)

Applicable Controller Specifications

Applicable controller	Maximum controlled axes	Operating method	Power-supply voltage	Reference page
XSEL	6 axes	Program	Single-phase/ three-phase AC 200 V	→P53
SSEL	2 axes	Program/positioner	Single-phase AC 100/200V	→P52
SCON	1 axis	Pulse train/positioner	Single-phase AC 100/200V	→P51

Caution

(Note 1) The maximum speed may not be attained if the stroke is short.
(Note 2) The maximum acceleration varies depending on the operating conditions.
(Note 3) The maximum cable length is 20 m for the SCON/SSEL and 30 m for the XSEL. Specify a desired length in units of meters.
(Example: X08 = 8 m)

■ Model Name **LSA-S10SM** — **I** — **200** — — **T2** — —

Series — Type — Encoder type — Applicable drive output — Stroke — Applicable controller — Cable length — Options

I : Incremental specification 200W 200 : 60:60mm } T2 : SCON SSEL XSEL-P/-Q X□□ : N : None S : 3m M : 5m Refer to the options table below.

* Refer to P. 13 for details on each item comprising the model name. 1860:1860mm

Model Specifications

Model	Encoder type	Applicable drive output (per slider)	Stroke Specified in 90-mm steps (mm)	Speed (Note 1) (mm/sec)	Payload (Note 2)		Rated thrust (N)	Maximum thrust (N)	Maximum acceleration (G) (Note 2)
					Horizontal (kg)	Vertical (kg)			
LSA-S10SM-I-200- <input type="checkbox"/> -T2- <input type="checkbox"/> - <input type="checkbox"/>	I: Incremental	200	60-1860	2500	15	-	65	260	3

* In the above model names, indicates the stroke, indicates the cable length, and indicates the options.

Options

Name	Model	Reference page	Remarks
Cable track installation direction	CT5	→P14	Sideway specification
Cable track for user wiring, type S	US1/US5	→P14	Standard specification/sideway specification
Cable track for user wiring, type M	UM1/UM5	→P14	Standard specification/sideway specification

Note) To change the cable track position to the opposite side, install the actuator by rotating it 180 degrees horizontally because the actuator is bilaterally symmetrical.

Common Specifications

Drive method	Linear servo motor
Positioning repeatability	±0.005mm
Guide	Built-in linear guide
Permissible load moment	Ma: 57.4N • m Mb: 81.9 • m Mc: 60.8N • m
Overhang load length	300 mm or less in Ma direction / 300 mm or less in Mb/Mc directions
Base	Material: Aluminum with white alumite treatment
Applicable controller	T2: SCON, SSEL, XSEL-P/Q
Cable length (Note 3)	N: No Cable S: 3m M: 5m X□□: Specified length
Ambient operating temperature	0 to 40°C, 85% RH or below (non-condensing)

Applicable Controller Specifications

Applicable controller	Maximum controlled axes	Operating method	Power-supply voltage	Reference page
XSEL	6 axes	Program	Single-phase/ three-phase AC200 V	→P53
SSEL	2 axes	Program/positioner	Single-phase AC100/200V	→P52
SCON	1 axis	Pulse train/positioner	Single-phase AC100/200V	→P51

Caution

(Note 1) The maximum speed may not be attained if the stroke is short.
 (Note 2) The maximum acceleration varies depending on the operating conditions.
 (Note 3) The maximum cable length is 20 m for the SCON/SSEL and 30 m for the XSEL. Specify a desired length in units of meters.
 (Example: X08 = 8 m)

Applicable Controller Specifications

Applicable controller	Maximum controlled axes	Operating method	Power-supply voltage	Reference page
XSEL	6 axes	Program	Single-phase/ three-phase AC 200 V	→P53
SSEL	2 axes	Program/positioner	Single-phase AC100/200V	→P52
SCON	1 axis	Pulse train/positioner	Single-phase AC100/200V	→P51

(Note 1) The maximum speed may not be attained if the stroke is short.
(Note 2) The maximum acceleration varies depending on the operating conditions.
(Note 3) The maximum cable length is 20 m for the SCON/SSEL and 30 m for the XSEL. Specify a desired length in units of meters. (Example: X08 = 8 m)

(Note 2) The maximum acceleration varies depending on the operating conditions.
(Note 3) The maximum cable length is 30 m. Specify a desired length in units of meters.
(Example: X08 = 8 m)

SCON

NEW

- 1-axis position controller that lets you operate linear servo actuators, single-axis robots and ROBO Cylinders with ease
- Pulse-train control is also supported

Easy Operation of Linear Servo Actuators, Single-axis Robots and ROBO Cylinders (RCS2)

In addition to linear servo actuators, the SCON also lets you operate single-axis robots and ROBO Cylinders (RCS2 series) of varying output levels from 20 to 750 W with ease.

Operation is very simple - all you need is to store various stopping positions in the controller, and then specify each desired position using an I/O signal from a host PLC.

Up to 512 points can be stored for stopping positions.

At-will Operation Using Pulse-train Control

In addition to the positioner function where the actuator is operated according to specified positions, the SCON also lets you freely control the stopping position, speed and acceleration using pulses from the host positioning unit.

This feature is ideal in applications where the target position changes every time or if you want to change the speed and acceleration freely.

Select from 6 Functions via I/O Pattern Switching

You can select six different functions including the solenoid mode where 3-point or 7-point positioning can be performed using control actions similar to when solenoid signals are used to move an air cylinder, and the teaching mode where the actuator can be jogged to a desired position for registration of the position where the actuator has stopped.

Direct Connection to DeviceNet, CC-Link and ProfiBus

If you select an optional network specification, the SCON can be connected directly to DeviceNet, CC-Link and ProfiBus (*1).

In addition to connecting directly to a field network, you can also connect your SCON to a field network via a gateway unit. This way, the SCON can receive stopping position data via the network or send the current position data to a PLC.

(*1) If the SCON is connected to a field network directly, its functions will be limited to the remote I/O level.

SSEL NEW

- Very affordable 2-axis controller capable of operating in the program mode or positioner mode
- Easy way to operate linear servo actuators

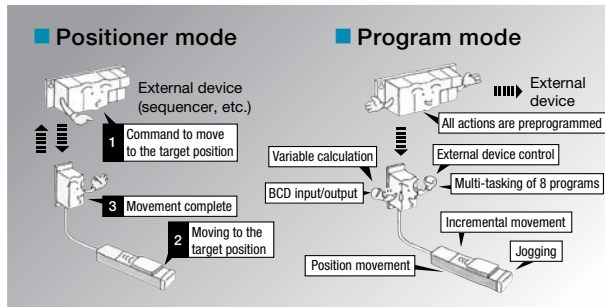

Supporting Single-axis Robots and ROBO Cylinders (RCS2 Series) in Addition to Linear Servo Actuators

In addition to linear servo actuators, the SSEL also lets you operate single-axis robots and ROBO Cylinders (RCS2 series) of varying output levels from 20 to 750 W. Since up to two axes can be controlled simultaneously, you can combine a large linear actuator with a single-axis robot, etc., to configure a system that transfers a load, performs coating or carries out other operations over a wide range.

Program Mode (High Function) and Positioner Mode (Easy Operation)

You can select the “Program Mode” where the actuator can be operated with the SSEL controller alone without using a PLC or other host device, or the “Positioner Mode” where the actuator is operated by issuing I/O signals from a PLC to specify desired position numbers pre-input to the SSEL. Use the program mode if your application involves coating, path operation or other interpolation operation, or when the SSEL must exchange I/O data frequently with an external device. For simple positioning operations, use the positioner mode.

Interpolation and Synchronized Operation of 2 Axes

Operations of two actuator axes can be interpolated, which is ideal for coating and sealing operations, among others. The SSEL also offers excellent locus accuracy and uniformity of speed comparable to the XSEL, a higher version of the SSEL. As for synchronized operation, two axes can be controlled simultaneously without delay, even when the synchronized axes are high-speed actuators such as linear servo actuators.

Standard USB Port

USB has become a standard interface between PCs and various peripherals. The SSEL also comes standard with a USB port. Accordingly, you can use a standard USB cable to connect your SSEL to a PC, even when the PC has no RS232C terminal, to perform data communication.

Multi-slider Collision Prevention Function

A new function has been added to prevent two sliders from colliding with each other when operated independently in the multi-slider operation mode. This function is effective not only during automatic operation, but also while the actuators are manually jogged. With the collision prevention function, you can be assured of safety at all time.

X-SEL

- High-function, multi-axis controller capable of controlling up to six axes simultaneously (*1)
- Directly connectable to DeviceNet, CC-Link and other field networks

*1 If all axes are linear servo actuators, only up to four axes can be connected.

Operating Up to 6 Axes for a Total Power Output of 2,400 W

Up to six axes of linear servo actuators, single-axis robots and ROBO Cylinders (RCS series) can be operated. For example, you can operate with one XSEL controller a combination of two synchronized linear servo actuators for the X-axis, single-axis robot for the Y-axis and ROBO Cylinder for the Z-axis.

A Lineup of “Global Models” Supporting Safety Category 4

The XSEL series includes “global models” having no built-in drive-source cutoff circuit so that the controller can be used with an external safety circuit. You can configure a safety circuit to meet safety category 4 under ISO 13849-1.

Many Network Options

Supporting DeviceNet, CC-Link, ProfiBus and Ethernet

In addition to standard PIO communication, the XSEL also offers optional specifications that support expansion PIO communication (maximum 192 input points and 192 output points) as well as various field networks (DeviceNet, CC-Link, ProfiBus and Ethernet). The XSEL also comes standard with a 2-channel RS232C communication function and also supports various other communication protocols.

Zone Signal

The zone signal is a function that causes a signal to be output when the slider moves into a specified zone that can be set freely within the stroke range. This function is effective if you want to output signals at desired positions during coating or other operation. (Up to four signal zones can be set for each axis.)

CE Mark Certification

The XSEL conforms to the CE Mark standard as shipped, so you can use within your product bound for overseas countries.

Multi-slider Collision Prevention Function

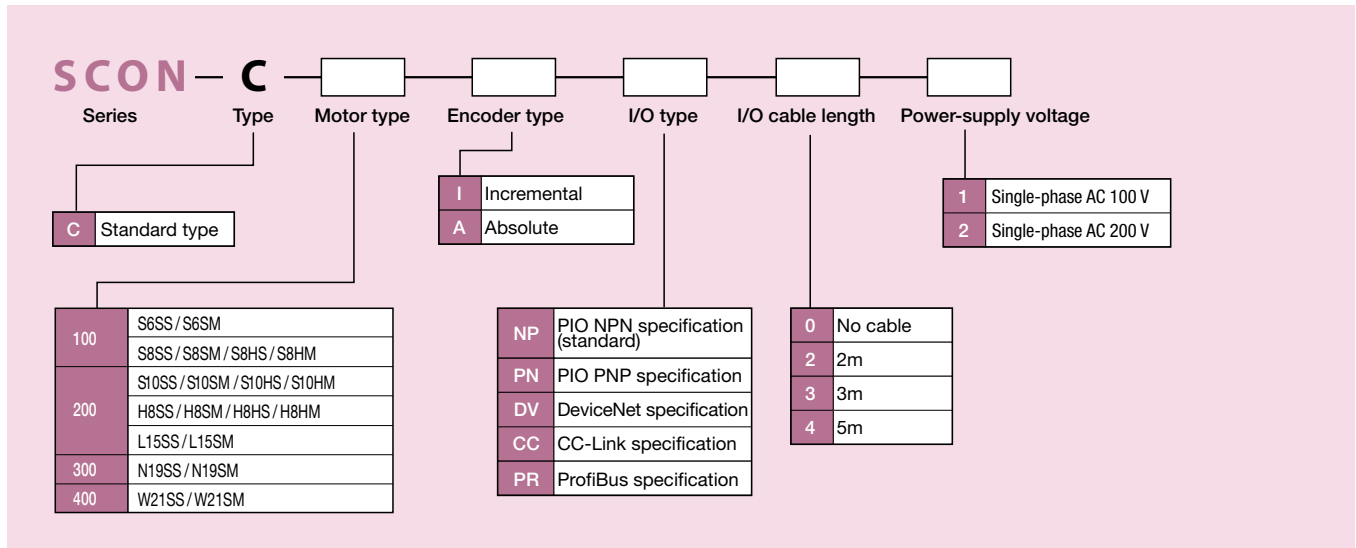

A function has been added to prevent two sliders from colliding with each other.

Controller Specifications

	Controller series/type	SCON	SSEL	XSEL	
				P (standard) type	Q (global) type
Basic specifications	Connected actuators	Linear servo actuators (excluding W21HS/W21HM) Single-axis robots (20 to 750 W)		Linear servo actuators (all models) Single-axis robots (20 to 750 W)

	Accessory	I/O flat cable (40 cores)		I/O flat cable (34 cores)	I/O flat cable (50 cores)

Controller Model/Specifications

Controller Model

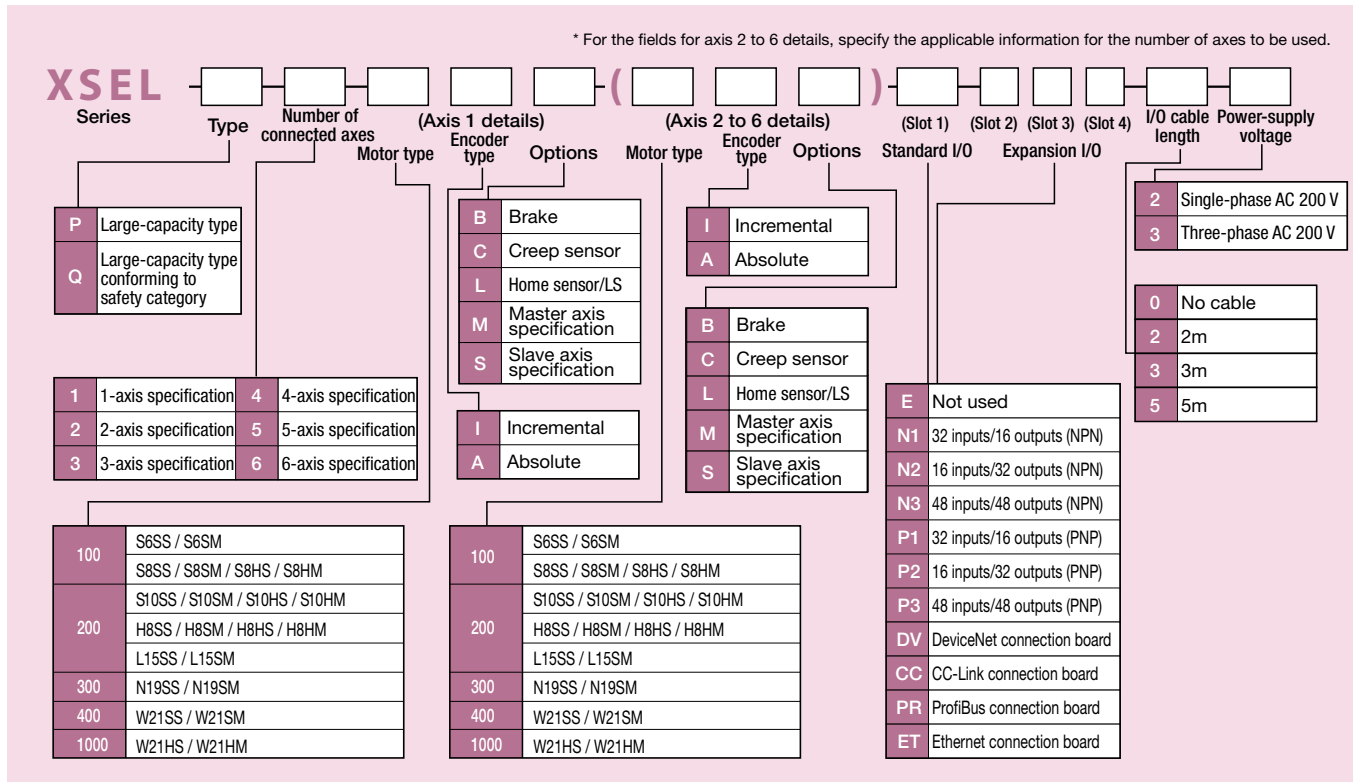

(Note) ● All linear servo actuator models are of incremental specification. Accordingly, absolute controllers cannot be used with linear servo actuators.

(Note) ● Large high-thrust actuators (W21H□) cannot be operated with the SSEL. Use an XSEL controller.

● If large actuators (W21□□) are to be operated, specify "L" in the options field.

● All linear servo actuator models are of incremental specification. Accordingly, absolute controllers cannot be used with linear servo actuators.

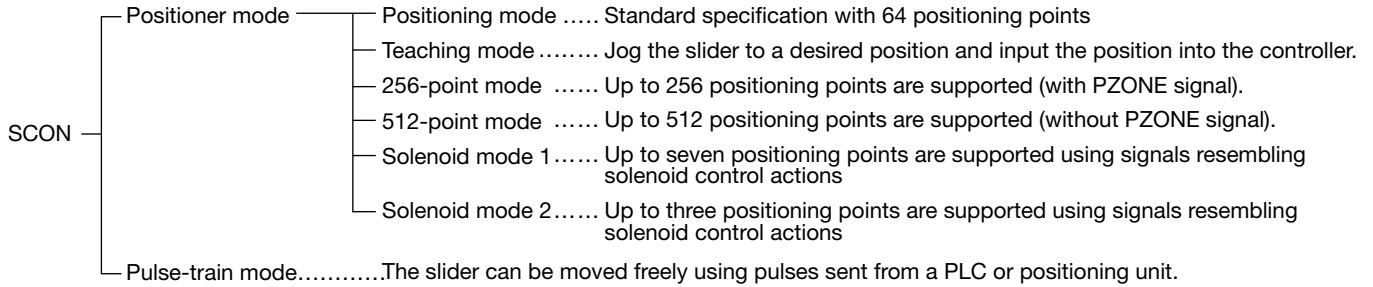

- (Note)**
- Although the XSEL controller can control up to six axes, take note that only up to four axes are accepted if all axes are linear servo actuators. In other words, axes 5 and 6 should always be single-axis robots.
 - If large high-thrust actuators (W21H□) are to be operated, take note that one large axis occupies the space for two axes (axes 1 and 2, or axes 3 and 4).
 - If large high-thrust actuators (W21□□) are to be operated, specify “L” in the options field.
 - All linear servo actuator models are of incremental specification. Accordingly, absolute controllers cannot be used with linear servo actuators.

I/O Signal Table

I/O Signal Table [SCON Controller]

* Take note that network-ready controllers do not support pulse-train control.

The SCON controller basically operates actuators using I/O signals from a PLC. However, you can change the functions pre-assigned to respective I/Os. Select a desired I/O signal assignment pattern according to the specific conditions of use, from a total of seven modes including six positioner modes and one pulse-train mode.

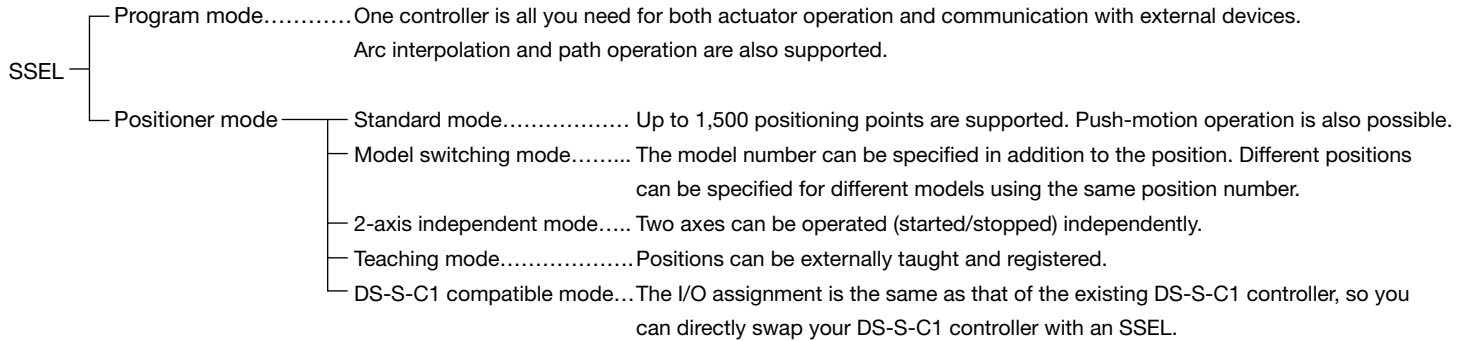

Pin No.	Category	Number of positioning points Zone signal P zone signal	Parameter (PIO pattern) selection						Pulse-train mode
			0	1	2	3	4	5	0
			Positioning mode	Teaching mode	256-point mode	512-point mode	Solenoid mode 1	Solenoid mode 2	Pulse-train mode

I/O Signal Table [SSEL Controller]

With the SSEL controller, you can select the “Program Mode” where a program is input to operate the actuator, or the “Positioner Mode” where the actuator moves to the position specified by a signal received from a host PLC. The positioner mode includes five input patterns suitable for different applications, so you can select a desired pattern to match the specific operation of your equipment. (Please contact IAI for details.)

Pin No.	Category	Board No.	Program mode	Positioner mode

* Positions can be input as either binary data or BCD data by switching the applicable setting.

I/O Signal Table

I/O Signal Table [XSEL Controller]

With the XSEL controller, the number of I/O points can be increased by installing up to three expansion I/O boards in addition to the standard I/O board.

You can select a desired type of expansion I/O board offering ① 32 input points/16 output points (model N1/P1), ② 16 input points/32 output points (model N2/P2), or ③ 48 input points/48 output points (model N3/P3).

Options

Teaching Pendant

Feature Teaching device offering functions for position input, test operation, monitoring, and more.

Model **RCM-T** (standard type)
RCM-TD (deadman switch type)
RCM-E (simplified teaching pendant)
RCM-P (data setting unit)

Configuration

RCM-T/TD

RCM-E

RCM-P

Specifications

Item	RCM-T-TD	RCM-E	RCM-P
Surrounding air temperature/humidity	Temperature 0 to 40°C / Humidity 85% RH or below		
Surrounding ambience	Free from corrosive gases. Not subject to significant powder dust.		
Weight	Approx. 650g	Approx. 400g	Approx. 360g
Cable length	5m		
Display	LCD display with 21 characters x 16 lines	LCD display with 16 characters x 2 lines	LCD display with 16 characters x 2 lines

PC Software (Windows Only)

Feature Startup support software equipped with functions for program/position input, test operation, monitoring, and more. Improved debugging functions help you reduce the time required for initial startup.

Model **RCM-101-MW**
 (with external device communication cable + RS232 conversion unit)

Configuration

Model **RCM-101-USB**
 (with external device communication cable + USB conversion unit + USB cable)

Item	IA-T-X/XD	IA-T-XA
Surrounding air temperature/humidity	Temperature 0 to 40°C / Humidity 85% RH or below	
Surrounding ambience	Free from corrosive gases. Not subject to significant powder dust.	Protected structure conforming to IP54
Weight	Approx. 650 g	Approx. 600 g (excluding cable)
Cable length	4m	5m
Display	LCD display with 20 characters x 4 lines	LCD display with 32 characters x 8 lines

PC Software (Windows Only)

Feature Startup support software equipped with functions for program/position input, test operation, monitoring, and more. Improved debugging functions help you reduce the time required for initial startup.

- Model** **IA-101-X-MW-J** (with RS232C cable + connector conversion cable)
IA-101-X-MW (with RS232C cable)

Configuration

- Model** **IA-101-XA-MW** (with cable conforming to safety category 4)

Configuration

Note
 Only PC software of version 6.0.0.0 or later supports linear controllers.

- Model** **IA-101-X-USB** (with USB cable)

Configuration

- Model** **IA-101-X-USBMW** (with USB conversion adapter + cable)

Configuration

Regenerative Resistance Unit

Feature This unit returns to heat the regenerative current produced by the motor during deceleration. Use the table on the right to check the total wattage of the actuators you want to operate, and provide one or more regenerative resistance units as required.

Model **REU-1 (XSEL)**

REU-2 (SCON/SSEL)

Specifications

Weight	0.9kg
Built-in regenerative resistor	220Ω 80W
Unit-controller connection cable (supplied)	CB-ST-REU010 (XSEL) CB-SC-REU010 (SSEL)

Reference for Determining the Necessary Number of Regenerative Resistance Units

	Horizontal			Vertical		
	XSEL	SSEL	SCON	XSEL	SSEL	SCON
0	~200W	~800W	~200W	~100W	~200W	~100W
1	~1000W		~750W	~800W	~600W	~400W
2	~1500W			~1200W	~800W	~750W
3	~2000W			~1600W		
4				~2000W		
5				~2400W		

External Dimensions

* Depending on the operating conditions, more regenerative resistance may be required than what is specified above.

* If you are using an SCON/SSEL and the total wattage suggests that you need two regenerative resistance units, use an REU-1 for the second unit.

Panel Unit

Feature Display unit for checking controller error codes and the program number of the current program.

Model **PU-1 (Cable length: 3 m)**

System-memory Backup Battery

Feature Use this battery if you are using global flags, etc., in your programs and thus want to retain the data even after the power is turned off. (This battery is used with the SSEL.)

Model **AB-5-CS (with case)**
AB-5 (battery only)

Absolute-data Backup Battery

Feature This battery backs up absolute data when an actuator of absolute specification is operated. The absolute-data backup battery is not required for linear servo actuators because all linear servo actuator models are of incremental specification.

Model **AB-5**

Dummy Plug

Feature This plug is connected to the teaching port on an SSEL controller to short the enable circuit, so that the controller can be connected to a PC via a USB cable. (The dummy plug is supplied with PC software IA-101-X-USB.)

Model **DP-3**

USB conversion adapter

Feature This adapter is used to convert signals received through the RS232 cable or external device communication cable to the format supported by the USB cable.

Model **IA-CV-USB**
(supplied with IA-101-X-USB)
RCB-CV-USB
(supplied with RCM-101-USB)

RS232 conversion adapter

Feature This adapter is used to convert signals received through the external device communication cable (RS485 communication) to the format supported by the RS232 terminal.

Model **RCB-CV-MW**
(supplied with RCM-101-MW)

USB Cable

Feature This cable is used to connect a controller with USB port (SSEL) to a PC. To connect a controller without USB port (XSEL) to a PC, use the USB conversion adapter to connect the RS232C cable to the USB cable, and connect the USB cable to the USB port on the PC. (Refer to the explanation of PC software IA-101-X-USBMW.)

Model **CB-SEL-USB010**
(Cable length: 1 m)

External Device Communication Cable

Feature This cable is used to connect an RS232 controller to a PC. (The RS232 conversion adapter is needed to connect to the PC.)

Model **CB-RCA-SIO050 (5m)**
(supplied with RCM-101-MW)

Connector Conversion Cable

Feature This conversion cable is used to connect the D-sub, 25-pin connector for teaching pendant or PC software to the teaching connector (half-pitch) on an SSEL controller.

Model **CB-SEL-SJ002**
(Cable length: 0.2 m)

External Dimensions/Options

Model **CB-X-MA**□□□ (for shaft type, small type, flat type, medium type)
CB-XMC-MA□□□ (for large type)

* Specify the cable length (L) in □□□. Example 080 = 8 m
 The maximum length is 20 m for the SCON/SSEL and 30 m for the XSEL.

Wire	Color	Signal	No.	No.	Signal	Color	Wire
0.75sq	Green	PE	1	1	U	Red	0.75sq (crimped)
	Red	U	2	2	V	White	
	White	V	3	3	W	Black	
	Black	W	4	4	PE	Green	

Encoder Cable (for Large Type)

Model **CB-X2-PLA**□□□

* Specify the cable length (L) in □□□. Example 080 = 8 m
 The maximum length is 20 m for the SCON/SSEL and 30 m for the XSEL.

Wire	Color	Signal	No.	No.	Signal	Color	Wire

-	-	-	-	18	BK+	Yellow	-

Connect the shielded cable to the hood via a clamp.
 Drain wire and braided shielded cable
 ("White/blue" in the wire color field indicates the band color/insulator color.)

Encoder Cable (for Shaft Type, Small Type, Flat Type, Medium Type)

Model **CB-X2-PA**□□□

* Specify the cable length (L) in □□□. Example 080 = 8 m
 The maximum length is 20 m for the SCON/SSEL and 30 m for the XSEL.

Connect the shielded cable to the hood via a clamp.
 Drain wire and braided shielded cable
 ("White/blue" in the wire color field indicates the band color/insulator color.)

I/O Flat Cable (for SSEL)

Model **CB-DS-PIO** □ □ □

*Specify the cable length (L) in □ □ □. A desired length up to 10 m can be specified. Example) 080 = 8 m

No.	Color	Wire	No.	Color	Wire
1A	Brown 1	Flat cable, pressure-welded	9B	Gray 2	Flat cable, pressure-welded
1B	Red 1		10A	White 2	
2A	Orange 1		10B	Black 2	
2B	Yellow 1		11A	Brown -3

Gray	Gray	GND	13
White/gray	White/gray	GND	14

0.2 sq. soldered
Shielded cable
Connect the shielded cable to a cable clamp.

Notes on Use

- ◆ This product uses high-performance rare earth permanent magnet. Accordingly, the product may cause malfunction of a pacemaker or other medical device implanted in the human body. If you are using a pacemaker or other implanted medical device, do not come near this product.
Also take note that bringing a mobile phone, watch, cash card or other precision device closer to the magnet part of this product may cause damage to the device.
- ◆ When installing this product, make sure the environment satisfies the following conditions:
Not exposed to direct sunlight / The machine does not receive irradiated heat from a large heat source such as a heat treatment oven / Ambient temperature is in a range of 0 to 40°C / Ambient humidity is 85% or below / Dews do not form / Free from corrosive or flammable gases / Not subject to significant dust / Free from oil mist or splashed cutting fluid / Not subject to vibration exceeding 0.3 G / Not exposed to significant electromagnetic waves, ultraviolet ray or radiation
- ◆ When handling this product, take note that exerting an excessive force on the stainless sheet at the top of the product may damage the stainless sheet. The product may also get damaged if dropped or struck. Handle the product with due care.
- ◆ This product cannot be used in a vertical position or to perform push-motion operation.
